

Car Rental Website – Project

Description

The **Car Rental Website** is a modern and user-friendly platform that makes finding and renting a car simple and convenient. Users can explore different vehicles, view their features and rental prices, and submit a booking request through an attractive and responsive interface.

Synopsis

This project focuses on developing a **responsive Car Rental Website using HTML5 and CSS3**. The website provides an organized platform where users can explore available cars, check their details, and make a rental request. With a clean design, easy navigation, attractive car cards, and responsive layouts, the website aims to provide a smooth and engaging user experience.

Objectives

- To design a modern and user-friendly car rental website.
- To provide detailed information about available vehicles.
- To create an easy and attractive car booking interface.
- To implement responsive web design using HTML and CSS.
- To gain practical experience in frontend web development.

Key Features

-  **Attractive Home Page** – Introduction to the rental service.
-  **Car Listings** – Displays cars with images, prices, and specifications.
-  **Car Details** – Shows important information about each vehicle.

-  **Booking Form** – Allows users to enter their rental requirements.
-  **Responsive Design** – Works smoothly on desktop, tablet, and mobile screens.
-  **Contact Section** – Provides contact and service information.
-  **Modern UI** – Clean layout, attractive cards, buttons, and navigation.

Technologies Used

- **HTML5** – Website structure and content.
- **CSS3** – Styling, layouts, animations, and responsiveness.
- **GitHub** – Project version control and hosting.

Future Scope

The website can be further enhanced with **JavaScript, database integration, user login, online payments, real-time car availability, and an admin dashboard** to transform it into a complete car rental system.
